14. **Description (program conduction details) / speaker topic explanation:**
Rajgad Dnyanpeeth's Shri Chhatrapati College of Engineering Dhangwadi, Pune has conducted a workshop of "Recent trend in Pre-

Engineering Building" on 23rd April 2021 for faculties and students of civil branches to give information about "Recent trend in Pre-Engineering Building". Pre-engineered buildings are on the average 30% lighter because of the efficient use of steel. Secondary members are light weight roll formed "Z" or "C" shaped members. Quick and efficient design since PEB's are mainly formed by standard sections and connections design, time is significantly reduced. The erection process is faster and much easier with very less requirement for equipment. The low weight flexible frames offer higher resistance to seismic forces

15. Conclusion: The webinar explained it can be concluded that PEB structures are more advantageous than CSB structures in terms of cost effectiveness, quality control speed in construction and simplicity in erection. PEB roof structure is almost 30% lighter than conventional steel building.

WEBINAR REPORT

DEPARTMENT: E&TC

CLASS: TE, BE and Faculty

NAME OF GUEST/EXPERT: Prof. A. A. Joshi

FROM: Karmayogi Engineering College, Gat No 124, 125 At Post Shelve, Tal Pandharpur, Dist Solapur

TITLE/TOPIC: “Recent Trends in Biomedical Imaging”

DAY & DATE: 08-03-2021

DURATION OF SESSION: 3 Hours

NUMBER OF PARTICIPANTS: 84

CO-ORDINATOR: Prof. P. S. Gham

Objective: The webinar highlighted the medical imaging seeks to reveal internal structures hidden by the skin and bones, as well as to diagnose and treat disease. Medical imaging also establishes a database of normal anatomy and physiology to make it possible to identify abnormalities.

Description: Rajgad Dnyanpeeth's Shri Chhatrapati College of Engineering Dhangwadi, Pune has conducted a webinar of “Recent Trends in Biomedical Imaging” on 8th Mar 2021 for faculties, TE and BE students of all branches to give information about recent Trends in Biomedical Imaging.

Biomedical engineering is changing the way we interact with the world. From prosthetic limbs to medicine delivery technology, the pioneering research of biomedical engineers is shaking the foundations of traditional healthcare to its very core.

Biomedical engineering combines the design and problem-solving skills of engineering with medical biological sciences in order to improve healthcare treatment — including diagnosis, monitoring and therapy — and help people to live longer, better quality lives. The miniaturization of tech has also been a major breakthrough: facilitating the development of more advanced wearable technologies, micro needles for drug-delivery systems and sensors for brain-controlled prosthetics.

Rajgad Dnyanpeeth's
SHRI CHHATRAPATI SHIVAJIRAJE COLLEGE OF ENGINEERING
Gat No. 237, Pune Bangalore Highway, Dhangawadi, Tal – Bhor, Dist- Pune (MH)

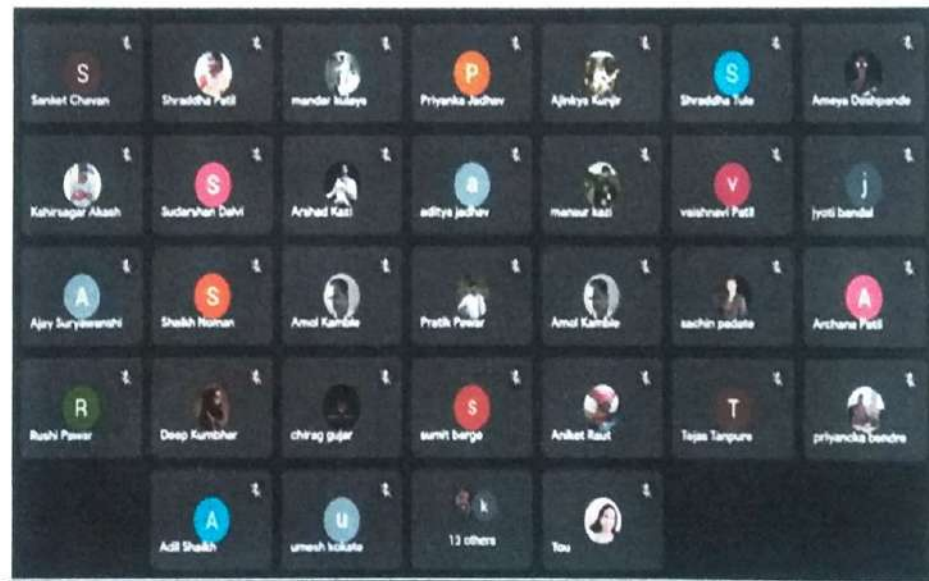

During the meeting, they outlined their intentions to see biomedical engineering recognised as an independent profession by 2020, which is especially important given that maintenance of machines in hospitals is essential for patient care. For people working as biomedical engineers, there's never been a better time to be in the workforce.

While healthcare organizations and institutions are warming to the widespread implementation of biomedical technology, researchers are guiding us through previously uncharted waters.

Conclusion:

Students engaged in interactive webinar and it is found to be very informative and knowledgeable to help biomedical imaging offers precise tracking of metabolites that can be used as biomarkers for disease identification, progress, and treatment response.

DAY & DATE: 8/10/2020 DURATION OF SESSION: 1 Day

ATTENDIES: 57

CO-ORDINATOR: Prof. J. J. Bandal

OBJECTIVE: The objective of the Course is to create awareness among participants regarding Protection Circuits for Power Factor Correction.

DESCRIPTION: Department of Electronics and telecommunication organized online Webinar on **"Protection Circuits for Power Factor Correction"** on 8/10/2020 for TE, and BE E&TC students to give information about Protection Circuits for Power Factor Correction.

A power factor correction (PFC) circuit is added to a power supply circuit to bring its power factor close to 1.0 or reduce harmonics. This application note discusses the basic topologies of the PFC circuits and their operations. There are three PFC techniques: 1) passive (static) PFC using a reactor; 2) switching (active) PFC that controls a current at high frequency using a switching device; and 3) partial-switching PFC that switches on and off a switching device to control the current a few times per mains cycle and whose applications are restricted. To reduce the size and improve the efficiency of power supplies, switching PFC circuits in various topologies have appeared, including interleaved and bridgeless PFC.

Performance Enhancement of DC Motor

DEPARTMENT: E&TC

CLASS: Faculties and students of E & TC

NAME OF GUEST/EXPERT: Prof. R. R. Halcherikar

FROM: Karmayogi Engineering College

TITLE/TOPIC: "Performance Enhancement of DC Motor"

DAY & DATE: 03rd February 2021

DURATION OF SESSION: 1 Day

ATTENDEES: 72

CO-ORDINATOR: Prof. R. S. Nipanikar

OBJECTIVE: The aim of this webinar is to provide Basic knowledge of DC Motor and various methods for enhancing its performance. Because of the simplicity, high reliability, flexibility and low costs DC motor drives are widely used in various fields of industry, robotics and home appliances. Hence it is important to enhance its performance for better use.

DESCRIPTION: Department of Electronics and telecommunication organized Webinar on "Performance Enhancement of DC Motor" on 03rd February 2021 for Faculties and students of E & TC Department.

A direct current (DC) motor is a type of electric machine that converts electrical energy into mechanical energy. DC motors take electrical power through direct current, and convert this energy into mechanical rotation.

A Direct Current Motor, DC is named according to the connection of the field winding with the armature. Mainly there are two types of DC Motors. One is Separately Excited DC Motor and other is Self-excited DC Motor. The self-excited motors are further classified as Shunt wound or shunt motor, Series wound or series motor and Compound wound or compound motor.

Gat. No. 237, Pune Bangalore Highway, Dhangawadi, Tal: Bhor, Dist: Pune

In Separately Excited DC Motor, the field coils or field windings are energized by a separate DC source

In a Self-excited type of motor, the current in the windings is supplied by the machine or motor itself. Self-excited DC Motor is further divided into shunt wound, and series wound motor.

The five ways to improve the DC Motor Performance are:

1. Use the right motor for the job.
2. Check and replace carbon brushes regularly.
3. Be aware of any excessive noise or vibration.
4. Take note of any underperformance.
5. Keep your motor properly maintained.

CONCLUSION: From this webinar the participants learned the importance of DC Motor, its applications and the various methods to improve its performance. As the DC Motor find wide applications in daily life it is important to focus on its improvement for higher efficiency.

WEBINAR REPORT

DEPARTMENT: E&TC

CLASS: SE, TE, BE students, Professionals and Faculties from inside and outside of college

NAME OF GUEST/EXPERT: Prof. J. I. Mudegaonkar.

FROM: Karmayogi Engineering College ,Shelve,Pandharpur.

TITLE/TOPIC: “Diagnosis of Brain Diseases using MRI”

DAY & DATE: 10th September 2020

DURATION OF SESSION: 2 Hr

ATTENDIES: 96

CO-ORDINATOR: Prof. S.Y.Tule

OBJECTIVE: The aim of this Webinar is to impart knowledge how the different Brain diseases are diagnosed by using MRI Imaging Technique. The webinar will focus on Most of these methods to diagnose different diseases and detect damage to the brain caused by an injury or a stroke.

DESCRIPTION: Department of Electronics and telecommunication organized Webinar on “Diagnosis of Brain Diseases using MRI” on 10/09/2020 for SE, TE, BE students, Professionals and Faculties from inside and outside of college.

Magnetic resonance imaging (MRI) is a medical imaging technique that uses a magnetic field and computer-generated radio waves to create detailed images of the organs and tissues in body. Most MRI machines are large, tube-shaped magnets. Radio waves cause these aligned atoms to produce faint signals, which are used to create cross-sectional MRI images. The MRI machine can also produce 3D images that can be viewed from different angles. MRI produces high-resolution images of the inside of the body that help diagnose a variety of problems.

MRI of the brain and spinal cord:

MRI is the most frequently used imaging test of the brain and spinal cord. It's often performed to help diagnose:

- Disorders of the eye and inner ear

Rajgad Dnyanpeeth's
SHRI CHHATRAPATI SHIVAJIRAJE COLLEGE OF ENGINEERING
Gat. No. 237, Pune Bangalore Highway, Dhangawadi, Tal: Bhor, Dist: Pune

- Spinal cord disorders
- Stroke
- Tumors
- Brain injury from trauma

CONCLUSION: A special type of MRI is the functional MRI of the brain (fMRI). It produces images of blood flow to certain areas of the brain. It can be used to examine the brain's anatomy and determine which parts of the brain are handling critical functions. This helps identify important language and movement control areas in the brains of people being considered for brain surgery. Functional MRI can also be used to assess damage from a head injury or from disorders such as Alzheimer's disease.
