13. Outcomes: Student are aware that Electric vehicles (EVs) offer an opportunity to replace fossil fuels in the transport sector. Electrification of the transport sector can also bring benefits in terms of increased energy efficiency and reduced local pollution.
14. Description (program conduction details) / speaker topic explanation:
Rajgad Dnyanpeeth's Shri Chhatrapati College of Engineering Dhangwadi, Pune has conducted a webinar of "Electrical Vehicles and Batteries" on 16th Nov 2021 for faculties, TE and BE students to give information about electrical vehicles its working and job opportunities.

An electric car or battery electric car is an automobile that is propelled by one or more electric motors, using energy stored in batteries. Compared to internal combustion engine (ICE) vehicles, electric cars are quieter, have no exhaust emissions, and lower emissions overall. In the United States and the European Union, as of 2020, the total cost of ownership of recent electric vehicles is cheaper than that of equivalent ICE cars, due to lower fueling and maintenance

costs. Charging an electric car can be done at a variety of charging stations; these charging stations can be installed in both houses and public areas.

Out of all cars sold in 2020, 4.6% were plug-in electric, and by the end of that year there were more than 10 million plug-in electric cars on the world's roads, according to the International Energy Agency. Despite rapid growth, only about 1% of cars on the world's roads were fully electric and plug-in hybrid cars by the end of 2020. Many countries have established government incentives for plug-in electric vehicles, tax credits, subsidies, and other non-monetary incentives while several countries have legislated to phase-out sales of fossil fuel cars, to reduce air pollution and limit climate change.

With growing focus on switching the transportation from ICE vehicles to Electric vehicles, there are a lot of job opportunities that the existing workforce as well as the fresh talent can capitalize on. The EV industry is estimated to offer several job opportunities for skilled population. The significant profiles in the EV industry that require skillful employees are research, designing and development, manufacturing, vehicle maintenance, and infrastructure development.

14. **Conclusion:** Resource person guided that batteries are being engineered to have a long life. When the hybrid cars become more widespread, battery recycling will become economically possible. Research into other energy sources such as fuel cells and renewable fuels make the future look brighter for hybrid cars.
