## WORKSHOP REPORT

DEPARTMENT: E&TC

CLASS: T.E.

NAME OF GUEST/EXPERT: Mr. Choudhari

FROM: Winspire India Training Solution

TITLE/TOPIC: “PLC SCADA Automation”

DAY & DATE: 31<sup>th</sup> Jan 2017

DURATION OF SESSION: 1 day

STUDENT/ STAFF PRESENT: 42/4

CO-ORDINATOR: Prof. D. U. Dalavi

OBJECTIVE: The main objective of the program to develop interest in PLC SCADA. This workshop will cover from basics of definitions to development of projects. The main focus is on learning of PLC technology right from basic fundamental of PLC to complex programming concepts.

DESCRIPTION: Department of Electronics and telecommunication organized Workshop on “PLC SCADA Automation” from 31<sup>th</sup> Jan 2017 for T.E. E&TC students to enhance their knowledge in industry. PLCs are the main heart of the automation system. PLC is the controller used to control the plant/process/system/machine.

SCADA systems are crucial for industrial organizations since they help to maintain efficiency, process data for smarter decisions, and communicate system issues to help mitigate downtime.

The basic SCADA architecture begins with programmable logic controllers (PLCs) or remote terminal units (RTUs). PLCs and RTUs are microcomputers that communicate with an array of objects such as factory machines, HMIs, sensors, and end devices, and then route the information from those objects to computers with SCADA software. The SCADA software processes, distributes, and displays the data, helping operators and other employees analyze the data and make important decisions.

# SHRI CHHATRAPATI SHIVAJIRAJE COLLEGE OF ENGINEERING

Gat No. 237, Pune Bangalore Highway, Dhangawadi, Tal –Bhor, Dist- Pune (Maharashtra)

For example, the SCADA system quickly notifies an operator that a batch of product is showing a high incidence of errors. The operator pauses the operation and views the SCADA system data via an HMI to determine the cause of the issue. The operator reviews the data and discovers that Machine 4 was malfunctioning. The SCADA system's ability to notify the operator of an issue helps him to resolve it and prevent further loss of product.

CONCLUSION: PLC is Programmable logic controller. It's hardware, a controller, a device, which can be programmed and placed in the pane. , While SCADA is Supervisory control and data acquisition. It's monitoring software used to monitor and control the PLC, it should be installed in the computer.

**WORKSHOP REPORT**

DEPARTMENT: E&TC

CLASS: B.E.

NAME OF GUEST/EXPERT: Mr. Vardhman P. Titwane

FROM: V Soft Technology Pune

TITLE/TOPIC: "ARM Processor and Architecture"

DAY & DATE: 11<sup>th</sup> Jan 2017

DURATION OF SESSION: 1 day

STUDENT/ STAFF PRESENT: 35/9

CO-ORDINATOR: Prof. L. M. Sagale

OBJECTIVE: The main objective of the program to develop interest in ARM. Motivate students for ARM based students. This workshop will cover the aspects of embedded system design, applications, and current scenario in the industry

DESCRIPTION: Department of Electronics and telecommunication organized Workshop on "ARM Processor and Architecture" from 10<sup>th</sup> Jan 2017 for B.E. E&TC students to enhance their knowledge in industry. The ARM architecture (Advanced RISC Machine) is a 32-bit RISC processor architecture developed by ARM Limited that is widely used in embedded designs. Because of their power saving features, ARM CPUs are dominant in the mobile electronics market, where low power consumption is a critical design goal. Today, the ARM family accounts for approximately 75% of all embedded 32-bit RISC CPUs, making it one of the most widely used 32-bit architectures. ARM CPUs are found in most corners of consumer electronics, from portable devices (PDAs, mobile phones, media players, handheld gaming units, and calculators) to computer peripherals. ARM processor is optimized for cost and power sensitive MCU and mixed-signal devices for applications such as Internet of Things, connectivity, smart metering, human interface devices, automotive and industrial control systems, domestic household appliances, consumer products and medical instrumentation.

CONCLUSION: ARM micro controller platforms are very popular today because they provide high performance and power efficiency. ARM processors support both 32 bit and 16 bit computations. A number of architectural features are included to support low power operation. After conduction of this workshop students understand about micro controllers, embedded programming and peripherals for developing optimized embedded systems.

**SEMINAR REPORT**

**DEPARTMENT:** E&TC

**CLASS:** TE & BE

**NAME OF GUEST:** Mr. Sachin Mokashi

**TITLE/TOPIC:** Embedded Systems

**DATE:** 10/01/2017

**DURATION OF SESSION:** 11.00am

**STUDENT/ STAFF PRESENT:** 50/3

**CO-ORDINATOR:** Prof J. J. Bandal

**OBJECTIVE:** The Main objective of this seminar to know the idea and characteristics of Embedded Systems. Also to understand working and applications of Embedded Systems.

**DESCRIPTION:** An *embedded system* is a programmed controlling and operating *system* with a dedicated function within a larger mechanical or electrical *m*, often with real-time computing constraints. It is *embedded* as part of a complete device often including hardware and mechanical parts.

An embedded system works by incorporating a rugged computer board into an industrial enclosure with associated I/O (Input and Output) to fulfil a function in an embedded environment. The computing element is an embedded motherboard, which is the feature packed small form factor, heart of an embedded system.

Embedded systems come in a variety of shapes and sizes, from the largest multiple-rack data storage or networking powerhouses to tiny modules such as your personal MP3 player or cellular handset. Following are some of the usual characteristics of an embedded system:

- Contains a processing engine, such as a general-purpose microprocessor
- Typically designed for a specific application or purpose
- Includes a simple (or no) user interface, such as an automotive engine ignition controller
- Often is resource-limited. For example, it might have a small memory foot-print and no hard drive
- Might have power limitations, such as a requirement to operate from batteries
- Not typically used as a general-purpose computing platform
- Generally has application software built in, not user-selected
- Ships with all intended application hardware and software pre-integrated

RajgadDnyanpeeth's

## SHRI CHHATRAPATI SHIVAJIRAJE COLLEGE OF ENGINEERING

- Often is intended for applications without human intervention

**CONCLUSION:** Embedded System = A computer which is integrated into another system, the embedding system. Embedded systems are part of a bigger system. ... On the whole a hardware chip programmed for a dedicated task results in an embedded system. After this seminar students are able to understand the concept, characteristic and applications of embedded systems.
